power solutions and services to
New Zealand industry and infrastructure

NES Hire

Power & Pump Solutions

Providing bespoke pumping and power solutions and services to New Zealand industry and infrastructure

Introducing NES Hire

NES Hire Power & Pump Solutions is a leading industrial hire company specialising in power and pump solutions. Our core product range includes diesel generators, diesel and submersible pumps, diesel and hybrid lighting towers, and associated accessories. We cater to a diverse client base spanning industries

such as events, civil construction, geothermal, utilities, mining, and underground projects. What started as a small operation in Waihi has grown into a well-established business with 40 employees across five branches in the North Island. Despite our growth, we remain committed to providing tailored, reliable, high-quality solutions for every client.

NES Hire's Origins

NES Hire began as a local company in Waihi, New Zealand, with a simple yet powerful mission: to provide exceptional service and practical solutions from project conception to completion.

No matter the scale or complexity of a job, our team is dedicated to maintaining a personal, hands-on approach. Even though we have grown beyond our humble beginnings, our Waihi branch is still a hub of expertise, where our skilled personnel can manufacture or modify equipment

to meet the unique demands of any project. This adaptability ensures our clients receive the right solutions, every time.

What Sets Us Apart

Our ability to provide bespoke solutions is what truly differentiates us. Unlike many competitors, we don't just supply equipment — we tailor it. Thanks to our experienced team and specialist Waihi branch, we can modify any piece of our equipment to meet project-specific requirements. This level of customisation, combined with our commitment to reliability

and service excellence, makes us a trusted partner in the industry.

Project Spotlight

One of our standout recent projects involved the installation and commissioning of a ventilation system with gas detection in a tunnel being bored under State Highway 1 — the main entrance into Wellington. Despite the client having little site knowledge and no electrical plans, our team overcame these challenges to deliver a seamless solution. Our ability to quickly adapt to evolving site conditions, troubleshoot issues, and provide highly reliable equipment ensured the project was completed efficiently before the Christmas break. The client had previously

experienced frequent breakdowns with other suppliers' gear, making our dependable solutions a game-changer for the success of their project.

Looking Ahead

Our key focus for the coming year includes:

- Expanding into the South Island to better serve a growing client base.
- Diversifying our product range with cutting-edge solutions, including Battery Energy Storage Systems (BESS), camera towers, and an expanded hybrid lighting tower lineup.
- Continuing to refine and enhance our services, ensuring we remain

Our Partnership with MB Century

NES Hire has a longstanding relationship with MB Century, providing critical power and pumping solutions for well testing and drilling operations. Our services include:

- Supplying both hot and cold-water pumps for well testing and site works.
- Providing temporary water supply pumps during new well drilling.
- Delivering generators to support existing pump operations.
- Offering lighting towers for rig sites as required.

Our Sales and Systems Design Specialist, Georgia, works closely with MB Century from the initial design phase to project completion, ensuring each solution is precisely tailored to their operational needs.

at the forefront of the industry by providing innovative and sustainable solutions.

Final Thoughts

At NES Hire, we're more than just an equipment provider — we're a solutions partner. Our commitment to reliability, innovation, and customer-focused service ensures we continue to set industry benchmarks whilst helping our clients achieve their project goals efficiently and effectively.
